JCW User Charge	-	\$147 / ongoing	-	See footnote (4) for details.
Total Estimated Cost	\$275 /yr.	\$1,181	\$200	

(1) Lateral sewer costs would be assessed on a per Home-site basis with 352 lots in the lateral sewer district. Estimated annual costs for the proposed lateral sewers are based on the issuance of general obligation bonds for a period of 20 years and an estimated interest rate of 2.75%. Actual term and interest rate of bonds will be determined after project completion. The estimated cost of the sewer main project is \$2,024,814 and includes sewer main construction, engineering, and administrative costs. Property owners will be responsible for \$756,159 of the sewer main cost. At the property owner's option, their share of the capital cost of the main lines may be paid as a lump sum estimated to be \$2,148 per homesite without the interest associated with a 20-year special assessment for the lateral sewers.

(2) Based on single family home Capital Finance Charge for the November 2011 tax bills. These charges are reviewed annually by the Board of County Commissioners, and may increase or decrease.

(3) Based on 2011 Connection Fees for a single family home. For existing homes with septic tanks, these fees can also be paid as a lump sum of \$2,932. These charges are reviewed annually by the Board of County Commissioners, and may increase or decrease. Possible %50 reduction for 62 and older or low income.

(4) Based on water use. 2011 user charge rates are \$2.2355 per 1000 gallons plus a \$3.89 customer charge, billed bi-monthly for homes. These charges are reviewed annually by the Board of County Commissioners, and may increase or decrease.

(5) Decommissioning of septic or holding tanks and installation of the grinder pump unit are estimated to cost approximately \$8,627 for each home.
